

EDTA (EthyleneDiamineTetraacetic Acid), has been known as a broad-based chelator of heavy metals since the 1920's when it was used industrially, and now is one of the most widely used chelating agents in medicine with the capacity to attach and remove (chelate) almost every heavy metal.

There are various methods of introducing EDTA into the body: intravenous administration (I.V.), orally, as suppositories, and transdermal application. Although the I.V. administration has been used for many years, there are disadvantages such as excessive stress on the liver and kidneys, the time needed for safe administration, and a significantly high cost. (Treatment with a Certified Chelation Practitioner is the only safe I.V. option.)

Oral EDTA has to pass through the gastrointestinal (G.I.) tract, where digestive enzymes and acids break down the EDTA and diminish its effectiveness. EDTA in a dose high enough to be effective could irritate the stomach and/or intestines. It is also difficult to estimate absorption and regulate dosage when taken internally.

Rectal suppositories can be harsh and uncomfortable, and again, regulating dosage can be challenging and problematic.

A topical skin application of EDTA in a cream with a natural transdermal carrier agent is the most practical, comfortable and easiest option. Introducing...

EZDtox® Cream!

EZDtox® Cream provides a safe method for supporting overall health and wellness.

Directions for Use:

Apply up to 1 teaspoon of EZDtox Cream® to thin-skinned areas on your extremities, such as on inside of wrists, inside elbows, behind knees, sides or tops of feet. Massage into skin until absorbed. For best results, alternate application sites each day. Use 6 days a week, taking 1 day off.

Available in a premeasured
3.5 oz. pump and 4 oz. jar
1-month supply when used as directed.

A high-quality mineral supplement is recommended, taken at least 1 hour away from using this product.

**Exposure to toxic heavy metals
in our air, food, and water
affect everyone's health...**

**even when you are doing
your best to stay healthy!**

**Introducing an
Easy-to-Use
Daily Detox Cream...**

You Can Use at Home!

**Developed by
Dr. Michael W. Roth**

On a daily basis our bodies come in contact with harmful compounds that can cause numerous health challenges, disease, and a decreased quality of life. They are found in the air we breathe, the food we eat, and the water we drink. Everyone has these toxins circulating throughout their body. It's impossible to avoid.

The accumulation of these toxins can prevent optimal health, even when you are doing your best to stay healthy.

Heavy metal toxicity could lead to a number of health problems, including lower energy levels, damaged or reduced mental and central nervous function, and damage to the brain, blood composition, lungs, kidneys, liver, and other vital organs.

While acute toxicity is relatively easy to diagnose due to fast and severe symptom onset, signs of chronic exposure are much harder to diagnose. Symptoms are similar to acute exposure, but they are harder to pinpoint because they generally develop slowly over years of sustained exposure.

Diagnosing a person with chronic heavy metal toxicity can be difficult because symptoms may present themselves as various other ailments such as...

- nausea
- impaired cognitive, motor, and language skills
- nervousness and emotional instability
 - insomnia
 - muscle and joint pain
 - allergies
- general and chronic malaise
- weakened & auto-immunity
- intestinal dysbiosis, IBS, etc.
 - pain and inflammation

The human body has no ability to remove toxic heavy metals from extra-cellular spaces, interstitial fluids or fatty tissue.

Therefore, CHELATION THERAPY is the only treatment for this process. It helps reduce levels of heavy metals in the body, decreasing the production of free radicals, and preventing the breakdown of cell membranes, DNA, enzymes, lipoproteins and many other key metabolic and neurological functions.

Chelating toxic heavy metals may free up your body's natural healing mechanisms so it can focus on halting and possibly even reversing the progression of disease.

EZDtox[®] Cream
...is a revolutionary product that combines proven heavy metal chelation EDTA in an absorbable topical cream with additional natural ingredients and emulsifiers.
